

Digital Media Developers Group

February 2, 2006 Meeting Notes

Old Business

ITAB report: Bobbie Sue Koelling

The state is implementing ABSCAM to look for vulnerabilities in the networks. An assessment of instant messaging indicates that it may be more of a risk than a tool. The web content filtering group is still meeting.

Brown University Study

The group will meet next month after the next DMD meeting. There was much discussion about what the group is supposed to do and what the desired outcome of the group will be. The main idea is to evaluate the criteria the Brown study used, determine what criteria is particularly relevant to Missouri, and develop some best practices to deliver new services quickly and efficiently.

New Business

New SOS site

Erica Gage gave a demonstration of the new SOS site. The site is designed with two kinds of pop-up navigation, one driven by the SOS business units and one for general navigation. The pop-up menus are CSS-driven, although javascript is used for IE. One problem that came up was with a contractor that failed to implement the design changes appropriately.

Agency Projects/ Open Discussion

There was a brief discussion on kid's pages, their appropriateness and how they could be better used. Most agencies do not offer kids pages at this time.

The next meeting is Thursday, March 2, 2006 at 1:30 in Room 500 HST.
